TEST 2—FORM CODE 0Y

SECTION 1 Time—30 minutes, 45 Questions

For each question in this section, choose the best answer and fill in the corresponding oval on the answer sheet.

Each question below consists of a word in capital letters, followed by five lettered words or phrases. Choose the word or phrase that is most nearly opposite in meaning to the word in capital letters. Since some of the questions require you to distinguish fine shades of meaning, consider all the choices before deciding which is best.

Example:

GOOD: (A) sour (B) bad (C) red (D) hot (E) ugly

Ⓐ ● Ⓒ Ⓓ Ⓔ

1. PREMATURE: (A) presentable (B) robust (C) old (D) common (E) overdue

2. INTENSIFY: (A) weaken (B) darken (C) implant (D) appease (E) complicate

3. LUSCIOUS: (A) tiny (B) gloomy (C) unfamiliar (D) unpleasant to the taste (E) difficult to understand

4. DISCRIMINATING: (A) uncritical (B) infallible (C) inconsiderate (D) disrespectful (E) immoderate

5. OMISSION: (A) revival (B) decision (C) revision (D) inclusion (E) reversal

6. RATIFY: (A) accuse (B) doubt (C) reject (D) precede (E) transgress

7. DEMOTE: (A) attack (B) accuse (C) advance (D) invest (E) reveal

8. INERTIA: (A) disposition to action (B) sensitivity to pain (C) availability of funds (D) obstruction of justice (E) application of logic

9. STUPEFY: (A) purify (B) excite (C) reward (D) disown (E) endanger

10. GRATE: (A) grow (B) stretch (C) eliminate (D) repress (E) soothe

11. PERIPHERY: (A) flaw (B) core (C) noise (D) rapidity (E) shadow

12. GUILE: (A) candor (B) maturity (C) politeness (D) boredom (E) poise

13. CAPITULATE: (A) deprive (B) resist (C) entitle (D) concur (E) suspend

14. INDIGENOUS: (A) abundant (B) urban (C) vulgar (D) alien (E) effective

15. SURREPTITIOUSLY: (A) haphazardly (B) dispassionately (C) zealously (D) in an open manner (E) with reservations

Each sentence below has one or two blanks, each blank indicating that something has been omitted. Beneath the sentence are five lettered words or sets of words. Choose the word or set of words that, when inserted in the sentence, best fits the meaning of the sentence as a whole.

Example:

Although its publicity has been ----, the film itself is intelligent, well-acted, handsomely produced, and altogether ----.

(A) tasteless. .respectable (B) extensive. .moderate (C) sophisticated. .amateur (D) risqué. .crude (E) perfect. .spectacular

● Ⓑ Ⓒ Ⓓ Ⓔ

16. While a computer cannot --- an instructor, it can take over many --- tasks, thus allowing the instructor to spend more time helping individual students.

(A) obstruct. .arguable (B) contradict. .related (C) recommend. .creative (D) assist. .serious (E) replace. .routine

17. She was not really ----; it was just that she enjoyed --- and withdrew from time to time to reflect on her life.

(A) a recluse. .company (B) a scholar. .success (C) an introvert. .solitude (D) a reformer. .helping (E) a spectator. .entertainment

18. The viola has never commanded the popular appeal of the piano, and yet contemporary composers are ---- to write for such an outstanding violist as Karen Phillips.

(A) afraid (B) unfit (C) eager (D) averse (E) powerless

19. The very ---- of sand in the area made it so --- that even geologists did not stop to ask how it came to occupy its place in the landscape.

(A) abundance. .familiar
(B) appearance. .unusual
(C) structure. .complex
(D) composition. .unnatural
(E) abrasiveness. .minute

20. When proposing long-range goals for science, Symes becomes uncharacteristically ---, a failure he shares with many who are more --- as critics of existing undertakings than as visionaries of the future.

(A) subtle. .devious (B) abstract. .appreciative (C) astute. .perceptive (D) explicit. .articulate (E) ambiguous. .lucid

1

Each passage below is followed by questions based on its content. Answer the questions following each passage on the basis of what is stated or implied in that passage.

The voyagers scanned the shore.

On the distant dunes were set many little black cottages, and a tall white windmill reared above them. No man, nor dog, nor bicycle appeared on the beach. The cottages might have formed a deserted village.

A conference was held in the boat. "Well," said the captain, "if no help is coming, we might better try a run through the surf right away. If we stay out here much longer we will be too weak to do anything for ourselves at all." The others silently acquiesced in this reasoning. The boat was headed for the beach. The explorer wondered if people ever ascended the tall wind tower, and if then they ever looked seaward. This tower was a giant, standing with its back to the plight of the ants. It represented to a degree, to the explorer, the serenity of nature amid the struggles of the individual. Nature did not seem cruel to him then, nor beneficent, nor treacherous, nor wise. But she was indifferent, flatly indifferent. It is, perhaps, plausible that a man in this situation, impressed with the unconcern of the universe, should see the innumerable flaws of his life, and have them taste wickedly in his mind and wish for another chance. A distinction between right and wrong seems absurdly clear to him then, in his proximity to the grave edge, and he understands that if he were given another opportunity he would mend his conduct and his words, and be better and brighter during an introduction or at a tea.

"Now, boys," said the captain, "she is going to swamp, sure. All we can do is work her in as far as possible, and then when she swamps, pile out and scramble for the beach. Keep cool now, and don't jump until she swamps sure."

The stoker took the oars. "Captain," he said, "I think I'd better bring her about, and keep her head-on to the seas and back her in."

"All right, Willie," said the captain. "Back her in."

The monstrous inshore rollers heaved the boat high until the men were again enabled to see the white sheets of water scudding up the slanted beach. "We won't get in very close," said the captain. Each time a man could wrest his attention from the rollers, he turned his glance toward the shore, and in the expression of the eyes during this contemplation there was a singular quality. The explorer, observing the others, knew that they were not afraid, but the full meaning of their glances was shrouded.

21. The decision to try immediately for the land was made because the
    (A) weather was worsening
    (B) men were becoming increasingly fatigued
    (C) men were becoming increasingly frightened
    (D) boat would not last much longer
    (E) men knew that the village was deserted

22. It was decided that the boat would ride best if it were
    (A) parallel to the wave crests
    (B) adjacent to the coral reef
    (C) pointed into the wind
    (D) pointed away from shore
    (E) pointed into shore

23. The explorer in the passage shows himself to be
    (A) more concerned with practical matters than the stoker
    (B) resourceful in an emergency situation
    (C) optimistic about his chances for survival
    (D) frightened to the point of being helpless
    (E) detached and pensive during the event related

24. In relation to the rest of the men, the captain is
    (A) aloof and cynical
    (B) worried and irritable
    (C) modest and solicitous
    (D) confused but jovial
    (E) authoritative but informal

25. Which of the following contrasts represents an underlying theme in the passage?
    (A) Action and contemplation
    (B) Love and hate
    (C) Skill and ineptitude
    (D) Faithfulness and betrayal
    (E) Loneliness and popularity

The reading passages in this test are brief excerpts or adaptations of excerpt from published material. The ideas contained in them do not necessaril represent the opinions of the College Board or Educational Testing Service. T make the text suitable for testing purposes, we may in some cases have altere the style, contents, or point of view of the original.

The classic difficulty felt with democracy arises from the fact that democracy can never express the will of the whole people because there never exists any such monolithic will (at least in any society that can call itself democratic). The concept of government of the whole people by the whole people must be looked on as being in the poetry rather than in the prose of democracy; the fact of prose is that real democracy means government by some kind of dominant majority.

And the ever-present danger, repeatedly realized in fact, is that this dominant majority may behave toward those who are not of the majority in such a manner as to undercut the moral basis of democracy itself—respect for human beings, for the right of people, because they are people, to have some important say in the setting of their own course and in the use of their own faculties. Other forms of government may similarly fail to respect human independence. But there is at least no contradiction in that; the underlying assumption of every kind of government by wisers and betters is that people on the whole are not fit to manage their own affairs, but must have someone else do it for them, and there is no paradox when such a government treats its subjects without respect, or deals with them on the basis of their having no rights that the government must take into account. But democracy affirms that people are fit to control themselves, and it cannot live in the same air with the theory that there is no limit to the extent to which public power—even the power of a majority—can interfere with the lives of people.

Rational limitation on power is therefore not a contradiction to democracy, but is of the very essence of democracy as such. Other sorts of government may impose such limitations on themselves as an act of grace, of noblesse oblige. Democracy is under the moral duty of limiting itself because such limitation is essential to the survival of that respect for humankind which is in the foundations of democracy. Respect for the freedom of all people cannot, of course, be the only guide, for there would then be no government. Delicate ongoing compromise is what must be looked for. But democracy, unless it is to deny its own moral basis, must accept the necessity for making this compromise and for giving real weight to the claims of those without the presently effective political power to make their claims prevail in elections.

26. By "the prose of democracy" (line 8) the author apparently means its

(A) theory (B) duties (C) compromises
(D) actual operation (E) rational limitations

27. With respect to the failure of nondemocratic governments to respect human independence, the author says that this failure

(A) limits the political power of such governments
(B) is consistent with the basic premises of such governments
(C) interferes with the rights of the minority under such governments
(D) hampers the achievement of the ultimate objectives of such governments
(E) leads to consequences that cannot be anticipated by such governments

28. The respect for human liberty which the author advocates would, in its extreme form, lead to

(A) anarchy (B) tyranny (C) compromise
(D) peace (E) nonconformity

29. According to the passage, which of the following does the author consider essential for the preservation of the moral basis of democracy?

I. Limitations on the power of the government
II. Consideration of the rights of the minority
III. Development of the abilities of the people

(A) I only (B) II only (C) I and II only
(D) II and III only (E) I, II, and III

30. According to the passage, unlike other types of government, democratic governments believe that the

(A) minority must merge with the majority for effective government
(B) government must determine the course of its citizens' lives
(C) government cannot express the will of all the people
(D) individual is capable of directing his own affairs
(E) individual is subordinate to the state

1

Select the word or set of words that best completes each of the following sentences.

31. A stone helmsman at the waterfront ---- the crew of a trawler that capsized in winter waters, the sailors helpless to clear masts ---- ice.

(A) exonerates. .disguised by
(B) chastises. .preserved with
(C) isolates. .wasted by
(D) commemorates. .encrusted with
(E) immortalizes. .immune to

32. This is an essay invested with a mood of ----, even of bliss, without a single ---- note of repentance.

(A) solemnity. .wistful (B) remorse. .jarring
(C) delight. .jubilant (D) serenity. .discordant
(E) apprehension. .melancholy

33. Modern scientists hold that truth is not something that we first ---- and then ---- in all its ramifications, but something found at the end of long investigations.

(A) postulate. .explore (B) prove. .discover
(C) identify. .discredit (D) predict. .attack
(E) reveal. .impose

34. American courts have changed little in form over the years, but the role they perform has been far from ----.

(A) simple (B) static (C) radical
(D) dynamic (E) unimportant

35. For all his familiarity with the peoples of every continent, Landers was the most ---- of historians; he looked out upon the whole world, but he looked through British spectacles.

(A) shortsighted (B) broad-minded
(C) conservative (D) parochial
(E) introspective

Each question below consists of a related pair of words or phrases, followed by five lettered pairs of words or phrases. Select the lettered pair that best expresses a relationship similar to that expressed in the original pair.

Example:

YAWN : BOREDOM :: (A) dream : sleep
(B) anger : madness (C) smile : amusement
(D) face : expression (E) impatience : rebellion

Ⓐ Ⓑ ● Ⓓ Ⓔ

36. EAT : GOBBLE :: (A) read : summarize
(B) hiss : giggle (C) drink : guzzle
(D) dance : leap (E) bend : somersault

37. SCULPTOR : CHISEL :: (A) potter : wheel
(B) photographer : studio (C) printer : mint
(D) model : portrait (E) engraver : design

38. VACCINATION : DISEASE ::
(A) refrigeration : spoilage (B) laceration : bruise
(C) filtration : leakage (D) dehydration : storage
(E) pasteurization : health

39. RAMBLE : AIMLESSLY :: (A) beckon : vocally
(B) sprint : daintily (C) totter : unsteadily
(D) lunge : secretly (E) doze : horizontally

40. MINISTER : CLERGY ::
(A) philosopher : ethics (B) layman : priesthood
(C) principal : administration (D) lawyer : jury
(E) student : curriculum

41. STUBBLE : WHEATFIELD :: (A) crops : furrow
(B) cattle : meadow (C) stumps : grove
(D) footprints : trail (E) bouquet : garden

42. RIDDLED : HOLES :: (A) blighted : plants
(B) wrinkled : creases (C) erased : errors
(D) patched : rips (E) sheltered : enemies

43. BABBLE : MEANING :: (A) argue : vehemence
(B) shout : volume (C) grumble : complaint
(D) stammer : hesitation (E) drone : emotion

44. PECCADILLO : CRIME :: (A) speck : stain
(B) chance : destiny (C) larceny : perjury
(D) asset : liability (E) limerick : prose

45. OPAQUE : LIGHT :: (A) speculative : reasoning
(B) courageous : defeat (C) intuitive : learning
(D) inviolable : harm (E) fanatical : spirit

IF YOU FINISH BEFORE TIME IS CALLED, YOU MAY CHECK YOUR WORK ON THIS SECTION ONLY. DO NOT TURN TO ANY OTHER SECTION IN THE TEST. **STOP**

SECTION 2 Time—30 minutes, 25 Questions

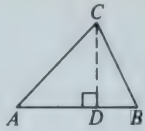

In this section solve each problem, using any available space on the page for scratchwork. Then decide which is the best of the choices given and fill in the corresponding oval on the answer sheet.

The following information is for your reference in solving some of the problems.

Circle of radius r: Area $= \pi r^2$; Circumference $= 2\pi r$
The number of degrees of arc in a circle is 360.
The measure in degrees of a straight angle is 180.

Definition of symbols:

$=$ is equal to	$\leqq$ is less than or equal to
$\neq$ is unequal to	$\geqq$ is greater than or equal to
$<$ is less than	$\parallel$ is parallel to
$>$ is greater than	$\perp$ is perpendicular to

Triangle: The sum of the measures in degrees of the angles of a triangle is 180.
If $\angle CDA$ is a right angle, then

(1) area of $\triangle ABC = \frac{AB \times CD}{2}$

(2) $AC^2 = AD^2 + DC^2$

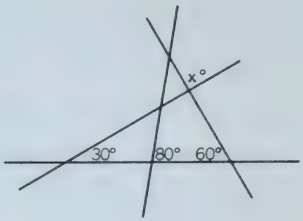

Note: Figures that accompany problems in this test are intended to provide information useful in solving the problems. They are drawn as accurately as possible EXCEPT when it is stated in a specific problem that its figure is not drawn to scale. All figures lie in a plane unless otherwise indicated. All numbers used are real numbers.

1. Which of the following is equal to an odd number?

(A) 8×7
(B) $43 + 29$
(C) $37 - 13$
(D) $35 \div 5$
(E) 2^3

2. $\frac{x+y}{4} + \frac{z}{4} =$

(A) $x + y + z$
(B) $\frac{x+y+z}{2}$
(C) $\frac{x+y+z}{4}$
(D) $\frac{x+y+z}{8}$
(E) $\frac{x+y+z}{16}$

3. In the figure above, x =

(A) 40 (B) 50 (C) 60 (D) 90 (E) 130

4. In a certain list of numbers, every odd-numbered term (beginning with the first) is $\frac{1}{2}$, and every even-numbered term (beginning with the second) is $-\frac{1}{2}$. What is the sum of the first 10 terms in this list?

(A) -5 (B) $-\frac{1}{2}$ (C) 0 (D) $\frac{1}{2}$ (E) 5

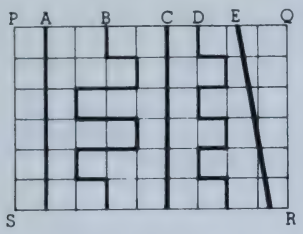

GO ON TO THE NEXT PAGE

5. How many more boxes would be needed to package 1,200 magazines in boxes of 10 than in boxes of 12 ?

(A) 2
(B) 10
(C) 20
(D) 100
(E) 200

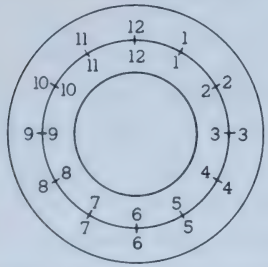

6. If $\frac{4}{3} = \frac{12}{x}$, then $x =$

(A) 1 (B) 9 (C) 11 (D) 12 (E) 16

7. In the figure above, rectangle PQRS is divided into 54 squares of equal area. Which darkened path divides PQRS into two parts whose areas are in the ratio 1 to 2 ?

(A) A (B) B (C) C (D) D (E) E

8. The outer dial in the figure above is to be turned clockwise four division marks, while the inner dial remains stationary. If each pair of adjacent numbers, one from the outer and one from the inner dial, is then added, what is the greatest such sum obtained?

(A) 32 (B) 28 (C) 24 (D) 20 (E) 16

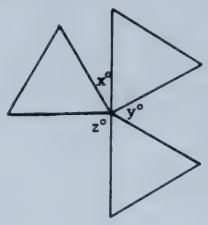

9. In the figure above, arcs are drawn above the number line every 3 units and below the number line every 2 units. If the arcs meet at P and at Q, at which of the following points on the number line will the arcs also meet?

(A) 252
(B) 253
(C) 254
(D) 255
(E) 256

10. If $3x = \sqrt{25} - \sqrt{16}$, then $x =$

(A) 9 (B) 3 (C) 1 (D) $\frac{1}{3}$ (E) $\frac{1}{9}$

11. In the figure above, if the three equilateral triangles have a common vertex, then $x + y + z =$

(A) 90 (B) 120 (C) 180 (D) 360
(E) It cannot be determined from the information given.

GO ON TO THE NEXT PAGE

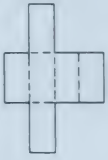

Student	First Test Score	Second Test Score
Amy	25	50
Biff	30	90
Chip	42	84
Dora	50	75

12. In the table above, which two students had the same per cent of improvement in scores from the first to the second test?

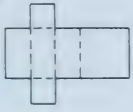

(A) Biff and Chip
(B) Biff and Dora
(C) Amy and Dora
(D) Amy and Biff
(E) Amy and Chip

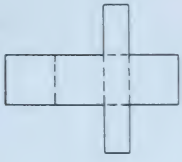

13. Which of the following figures could be folded along the dotted lines to form a closed rectangular box with no overlap?

(A) 

(B) 

(C) 

(D) 

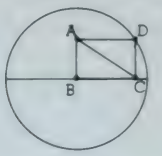

(E) 

14. If $(5^3)(2^5) = 4(10^k)$, then $k =$

(A) 2
(B) 3
(C) 4
(D) 6
(E) 8

15. If x is subtracted from y and this difference is divided by the sum of x and y, the result is

(A) $\frac{y - x}{x + y}$ (B) $\frac{x - y}{x + y}$ (C) -1 (D) 1 (E) 0

16. In the figure above, B is the center of the circle with radius r and ABCD is a rectangle. The length of diagonal AC is

(A) $\frac{r\sqrt{2}}{2}$

(B) $\frac{r\sqrt{3}}{2}$

(C) r

(D) $r\sqrt{2}$

(E) $r\sqrt{3}$

17. A number is given whose tens digit is t and whose units digit is u. If the digit 3 is placed between these two digits, the value of the new number is

(A) $t + u + 3$
(B) $10t + 30 + u$
(C) $10t + u + 3$
(D) $100t + 10u + 3$
(E) $100t + 30 + u$

18. The product of 3, 4, and y is equal to the sum of 4y and

(A) 3
(B) 8
(C) 12
(D) 3y
(E) 8y

GO ON TO THE NEXT PAGE

2

19. Some beads are arranged on a string as shown above. Starting with the bead at the arrow, how many beads must be moved from left to right in order for the fraction of beads on the left that are black to equal the fraction of beads on the right that are white?

(A) None
(B) One
(C) Two
(D) Three
(E) Four

---

20. What is the least number of distinct lines in a plane that can be drawn so that the total number of points of intersection is 6 ?

(A) 3 (B) 4 (C) 5 (D) 6 (E) 12

---

21. The cost C, in dollars, of producing X units of a product is given by the formula $C = kX + b$, where k and b are constants. If the cost of producing 100 units is \$1,500 and the cost of producing 250 units is \$2,250, then $k =$

(A) 15
(B) 12
(C) 9
(D) 7
(E) 5

---

22. If $1 \leqq n < m \leqq 9$ and n and m are integers, what is the least possible value of $\frac{n + m}{nm}$?

(A) $\frac{18}{81}$

(B) $\frac{17}{72}$

(C) $\frac{7}{10}$

(D) $\frac{5}{6}$

(E) $\frac{3}{2}$

EXPENDITURES IN FACTORY X FOR RAW MATERIALS IN 1977

Material	Per Cent
Paper	28
Wood	32
Metal	40

23. In the table above, if the total amount spent on wood and paper by Factory X in 1977 was \$277,200, how much was spent on paper?

(A) \$77,616
(B) \$129,360
(C) \$147,840
(D) \$184,800
(E) It cannot be determined from the information given.

---

24. If a right triangle has two sides of lengths 1 and $\sqrt{2}$, which of the following could be the length of the third side?

I. 1
II. $\sqrt{2}$
III. $\sqrt{3}$

(A) I only (B) II only (C) III only
(D) I and II only (E) I and III only

25. Each face of a cube is marked with a different integer from 11 to 16 inclusive. If two such identical cubes are rolled, the sum of the faces up could be how many different numbers?

(A) 11
(B) 12
(C) 18
(D) 32
(E) 34

IF YOU FINISH BEFORE TIME IS CALLED, YOU MAY CHECK YOUR WORK ON THIS SECTION ONLY. DO NOT TURN TO ANY OTHER SECTION IN THE TEST. **STOP**

SECTION 4 Time—30 minutes, 40 Questions

For each question in this section, choose the best answer and fill in the corresponding oval on the answer sheet.

Each question below consists of a word in capital letters, followed by five lettered words or phrases. Choose the word or phrase that is most nearly opposite in meaning to the word in capital letters. Since some of the questions require you to distinguish fine shades of meaning, consider all the choices before deciding which is best.

Example:

GOOD: (A) sour (B) bad (C) red (D) hot (E) ugly

Ⓐ ● Ⓒ Ⓓ Ⓔ

1. MATERIALIZE: (A) fade away (B) become old (C) move quickly (D) change direction (E) defy description

2. POTENT: (A) progressive (B) determined (C) tentative (D) increasing (E) ineffectual

3. HEED: (A) tamper with (B) share responsibility (C) fall short of (D) pay no attention to (E) bear no resemblance to

4. DRAWL: (A) lift forcibly (B) tilt dangerously (C) speak rapidly (D) wave frantically (E) bypass deliberately

5. INCIDENTAL: (A) fundamental (B) flagrant (C) unfounded (D) unbiased (E) accomplished

6. SLUGGARD: (A) fickle lover (B) impartial judge (C) intelligent answer (D) energetic person (E) immaculate attire

7. GERMINAL: (A) continually changing (B) urgently requested (C) diligently studied (D) actively pursued (E) fully developed

8. CAPRICIOUS: (A) quaint (B) stable (C) effortless (D) formless (E) proud

9. JADED: (A) grim (B) mild (C) even (D) fresh (E) formal

10. SALUBRIOUS: (A) cryptic (B) worldly (C) pious (D) poisonous (E) intoxicating

Each sentence below has one or two blanks, each blank indicating that something has been omitted. Beneath the sentence are five lettered words or sets of words. Choose the word or set of words that, when inserted in the sentence, best fits the meaning of the sentence as a whole.

Example:

Although its publicity has been ----, the film itself is intelligent, well-acted, handsomely produced, and altogether ----.

(A) tasteless. .respectable (B) extensive. .moderate (C) sophisticated. .amateur (D) risqué. .crude (E) perfect. .spectacular

● Ⓑ Ⓒ Ⓓ Ⓔ

11. The loss of weight in fad dieting is invariably ---; weight returns as soon as one resumes --- eating habits.

(A) temporary. .normal (B) slight. .new (C) injurious. .peculiar (D) slow. .regular (E) costly. .expensive

12. Garrison was austere and ---, a man of immense reserve and dignity.

(A) lax (B) rowdy (C) aloof (D) droll (E) abusive

13. There are so many --- limitations to our ability to control the sun's bounty that using solar energy begins to seem hopelessly impractical.

(A) immutable (B) inconsequential (C) irrelevant (D) innocuous (E) illusory

14. Rustin's vitriolic attack was the climax of the --- heaped on paintings that today seem amazingly ---.

(A) criticism. .unpopular
(B) ridicule. .inoffensive
(C) praise. .amateurish
(D) indifference. .scandalous
(E) acclaim. .creditable

15. Although Ms. Martin's appraisal of the city council's work is the most perceptive I have seen, it nonetheless contains some --- features.

(A) candid (B) absorbing (C) dubious (D) discerning (E) tangible

Each passage below is followed by questions based on its content. Answer the questions following each passage on the basis of what is stated or implied in that passage.

There is a heavy concentration of the poor in nonmetropolitan areas and their poverty is severe. Over 12 million people living outside metropolitan centers were below the officially defined poverty level in 1968. Nearly one out of five nonmetropolitan residents were poor compared with about one in ten among metropolitan residents, despite the fact that the numbers of poor were about the same in each of the areas. The greater severity of poverty for the nonmetropolitan poor is reflected by their incomes. The metropolitan poor averaged $538 per family member in 1968 compared to $497 for the nonmetropolitan poor.

Services of many kinds are less often available to both the poor and the nonpoor in nonmetropolitan areas than in metropolitan areas. And where they are available, the services are often inadequate. Medical, clinical, and family planning services are relatively lacking in rural areas, and library, legal aid, and welfare counseling services are also needed. The picture of inadequate services is too huge, and perhaps known too well, for detailed description here.

Both facilities and personnel for providing services tend to concentrate in urban centers. The resulting discrepancies in services may be illustrated by visits to a doctor's office. In 1966-1967 people in metropolitan areas averaged 4.5 visits, whereas outside of metropolitan centers, nonfarm residents averaged 4.1 and farm residents only 3.3 visits.

The nonmetropolitan population as a whole differs in several important respects from the metropolitan population. Nonmetropolitan residents are older, more frequently widowed, more often in poverty, less well-educated, and have more children. In 1969, for example, over half of female family heads were widows in nonmetropolitan areas, and ten per cent of all nonmetropolitan residents were 65 or older.

Historically, barriers have impeded the government from providing the same services for people in less densely settled areas as for those living in urban centers. In part a sort of inertia has set in which still makes it difficult to extend programs to rural areas. The greater cost per person of extending services into sparsely settled areas is a perpetual rationale for not providing services. Often the sheer logistics of getting the needed service to rural people are exceedingly difficult. Distances and isolation continue to hamper the provision of services to all citizens despite the fact that we now have the technology and skills to solve such problems. What is needed is a strong national commitment to solve them.

26. Which of the following titles best summarizes the content of the passage?

(A) New Problems for the Poor of Rural America
(B) Americans Commit Their Energies to Aiding the Poor in Rural Areas
(C) Ways to Ease the Burdens of the Poor in Rural America
(D) Barriers that Keep the Poor in Poverty
(E) Needed: Improved Services for Rural Americans

27. According to the passage, in comparison to the nonmetropolitan population as a whole, metropolitan residents are

(A) poorer
(B) younger
(C) less well-educated
(D) more frequently widowed
(E) more likely to have large families

28. It can be inferred from the passage that in 1968 the average earnings for a nonmetropolitan poor family of four were approximately

(A) $497 (B) $538 (C) $994
(D) $1,988 (E) $2,152

29. The author indicates that the need for improved services in rural America could be more adequately met if

(A) the public were made aware of the inadequacy of services in such areas
(B) new methods of dispensing services were devised
(C) local governments would assume full responsibility for provision of services
(D) present resources were mobilized according to a firm national resolve
(E) the individuals in rural America made greater efforts to have federal officials hear their grievances

30. The author's primary purpose in the passage is to

(A) compare various problems and indicate which is most urgent
(B) describe a continuing problem and urge its solution
(C) pinpoint the source of a problem and condemn those responsible for it
(D) propose answers to a problem and explain their application
(E) analyze popular attitudes to a problem and suggest ways of changing these attitudes

4

Many Americans have been touched by Charles Drew's genius–either as blood donors, blood recipients, or as Red Cross and medical workers who have helped in the annual blood bank drives. Few of those who are familiar with the blood bank know the name of Charles Drew; fewer still know that he was black. And few, perhaps, know of Dr. Louis T. Wright, the brain surgeon and antibiotic expert who developed the smallpox vaccine that is used today. Few know of Dr. Daniel Hale Williams, the first surgeon to operate successfully on the human heart; or of Dr. Ernest E. Just, who pioneered cell study.

I have mentioned these blacks because they have made contributions to medicine and health that in other circumstances and times would have ranked them with Pasteur in the public mind. They achieved extraordinarily by any measure. That they did so while burdened with the senseless weight of racial discrimination is not only to their credit but to the everlasting shame and loss of America. The loss is incalculable, and indeed, we can be certain that many black youths of talent, and perhaps many hundreds of true genius, have been lost to the nation forever simply because prejudice stopped them from developing and exercising their intellectual powers.

31. The author indicates that few Americans know about Dr. Louis T. Wright because

(A) others have taken credit for his contributions
(B) his work has been overshadowed by recent developments in his field
(C) racial discrimination prevented him from receiving widespread recognition
(D) his work was in a highly specialized area of medicine
(E) he was never allowed to reach his full potential as a scientific researcher

32. Which of the following does the author employ as his main tactic in indicating that America has wasted a valuable resource?

(A) He emphasizes the failures people have made as a result of discrimination.
(B) He cites examples of blacks who have succeeded in the scientific field.
(C) He suggests methods of preventing discriminatory practices in the future.
(D) He indicates that the loss of an individual is immeasurable and a price cannot be assigned to a person's life.
(E) He supplies detailed biographies of black doctors.

33. At the conclusion of the passage, the author's tone is one of

(A) indifference (B) bitterness
(C) bewilderment (D) surprise
(E) complacency

Dr. Austin Farrer once began a sermon with this statement:

> "It is generally thought that preachers should be allowed to get away with vagueness. Preachers ought to bang about with resonant words, and to ask them what precisely they mean is to misunderstand the business. For preachers are either speaking of divine things, or moving us to virtue; and in neither case is it sensible to ask for precision."

Dr. Farrer goes on to point out that although this attitude may be commonly adopted, there are obviously problems that demand precise answers from the pulpit. The quotation, however, raises questions of fundamental importance to any discussion of the sermon as literature. It could be argued that there are no grounds for including preaching in the canon of accepted literature because the particular circumstances in which sermons are created preclude the possibility of comparison.

Certainly an interest in sermons is on the whole rarely to be found in literary critics, who may devote much time to a study of ephemeral pamphlets, but whose knowledge of pulpit oratory is confined to the better-known passages of a Taylor or a Donne. While it is true that many sermons originally have been given by gesture or by intonation, the fact remains that to ignore them as literature is to except too much. Milton's *Areopagitica* was certainly not written with the sole intention of leaving to posterity a lasting impression of literary resonance.

34. The passage is mainly concerned with
    (A) whether sermons qualify as literature
    (B) what accounts for the ephemeral nature of sermons
    (C) why it is inevitable that sermons should be vague
    (D) why preachers must depend upon gesture and intonation
    (E) how we misunderstand the business of preaching

35. The author of the passage quotes the opening words of Dr. Farrer's sermon in order to
    (A) explain why it is difficult for preachers to be precise
    (B) show how Dr. Farrer differs from most other preachers
    (C) illustrate the similarities between a Farrer and a Taylor or a Donne
    (D) suggest why literary critics are inclined to give scant attention to sermons
    (E) encourage the reader to be tolerant of the lack of precision in pulpit oratory

36. It can be inferred that Milton's *Areopagitica* is cited because it
    (A) lacks precise reasoning
    (B) is best remembered for its literary resonance
    (C) has no intention of impressing us with its literary resonance
    (D) needs the emphasis which only the speaking voice and gesture can provide
    (E) has lasting literary merit

Claude Bernard, the great nineteenth-century physiologist, hypothesized many years ago that veins lying next to arteries in the limbs take up heat from the arteries, thus intercepting some of the body heat before it reaches the extremities. Recent measurements have proved that there is in fact some artery-to-vein transfer of heat in the human body. But this heat exchange in humans is minor compared with that found in animals possessing special networks of blood vessels which act as heat traps. This type of network, called rete mirabile, is a bundle of small arteries and veins, all mixed together, with the counterflowing arteries and veins lying next to each other. The retia are generally situated at the places where the trunk of the animal deploys into extremities. There the retia trap most of the blood heat and return it to the trunk.

There is another finding, however, which at first sight is puzzling. Many animals that spend a great deal of time in cold water or live in Arctic snow seem to lack retia to sidetrack body heat from their limbs. The absence of retia in these animals is explained, though, when we consider that all the animals are heavily insulated over most of their bodies. Their principal problem lies in getting rid of body heat rather than in conserving it. Equally puzzling is the discovery of retia in many tropical animals. It may be that these animals are hypersensitive to the cool temperature of the night air.

37. If the human body possessed rete mirabile networks, one of the networks would most probably be located in which of the following areas?

(A) Chest cavity (B) Knee joint (C) Feet
(D) Finger tips (E) Shoulder

38. Which of the following inferences can be made about animals with retia?

I. The blood circulating in their extremities is cooler than that in their trunk.
II. They tend to live in cold climates.
III. They have higher body temperatures than animals without retia.

(A) I only (B) II only (C) I and III only
(D) II and III only (E) I, II, and III

39. It can be inferred that the primary function of the retia described in the passage is to

(A) control the flow of blood to animals' extremities
(B) facilitate the transmission of body heat to animals' extremities
(C) generate body heat for those animals exposed to severely cold temperatures
(D) preserve the body heat of animals lacking sufficient external insulation
(E) filter impurities from venous blood before they are transmitted to the arteries

40. The author credits Claude Bernard with having

(A) theorized that veins lie next to arteries in the limbs
(B) suggested that veins absorb heat from arteries
(C) proven that there is artery-to-vein heat transfer in humans
(D) discovered the rete mirabile networks in animals
(E) explained why many arctic animals lack retia

IF YOU FINISH BEFORE TIME IS CALLED, YOU MAY CHECK YOUR WORK ON THIS SECTION ONLY. DO NOT TURN TO ANY OTHER SECTION IN THE TEST. **STOP**

SECTION 5 Time—30 minutes 35 Questions

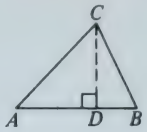

In this section solve each problem, using any available space on the page for scratchwork. Then decide which is the best of the choices given and fill in the corresponding oval on the answer sheet.

The following information is for your reference in solving some of the problems.

Circle of radius r: Area $= \pi r^2$; Circumference $= 2\pi r$
The number of degrees of arc in a circle is 360.
The measure in degrees of a straight angle is 180.

Definition of symbols:

$=$ is equal to	$\leqq$ is less than or equal to
$\neq$ is unequal to	$\geqq$ is greater than or equal to
$<$ is less than	$\parallel$ is parallel to
$>$ is greater than	$\perp$ is perpendicular to

Triangle: The sum of the measures in degrees of the angles of a triangle is 180.
If $\angle CDA$ is a right angle, then
(1) area of $\triangle ABC = \frac{AB \times CD}{2}$
(2) $AC^2 = AD^2 + DC^2$

Note: Figures that accompany problems in this test are intended to provide information useful in solving the problems. They are drawn as accurately as possible EXCEPT when it is stated in a specific problem that its figure is not drawn to scale. All figures lie in a plane unless otherwise indicated. All numbers used are real numbers.

1. If burlap costs \$0.48 per square meter, how many square meters of burlap can be bought for \$6.00?

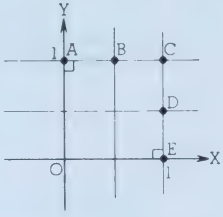

(A) $7\frac{2}{3}$ (B) 8 (C) 12 (D) $12\frac{1}{2}$ (E) 15

2. Which of the following is equal to 10?

(A) $2 \times [7 - (6 \div 3)]$
(B) $2 \times [(7 - 6) \div 3]$
(C) $[2 \times (7 - 6)] \div 3$
(D) $[(2 \times 7) - 6] \div 3$
(E) $(2 \times 7) - (6 \div 3)$

3. If $5 < x < 10$ and if x is one of the numbers 4, 6, 8, 10, or 12, what is the value of x?

(A) 4 (B) 6 (C) 8 (D) 10
(E) It cannot be determined from the information given.

4. In the figure above, which of the lettered points is (are) the greatest distance from O?

(A) C only
(B) B and D
(C) D and E
(D) A, B, and C
(E) All are equally distant from O.

5. If the average of 3 numbers is between 6 and 9, then the sum of the 3 numbers could be any one of the following EXCEPT

(A) 17 (B) $18\frac{1}{2}$ (C) 21 (D) 23 (E) $26\frac{1}{2}$

6. Sue is twice as old as Mary and Mary is one year older than Jim. If Jim is x years old, then an expression for Sue's age, in terms of x, is

(A) $2x + 1$
(B) $2x + 2$
(C) $2x - 2$
(D) $\frac{x + 1}{2}$
(E) $\frac{x - 1}{2}$

7. If x is an odd integer and y is an even integer, which of the following could be an even integer?

(A) $x + y$ (B) $x - y$ (C) $\frac{x}{2} + y$
(D) $x + \frac{y}{2}$ (E) $\frac{x}{2} + \frac{y}{2}$

Questions 8-27 each consist of two quantities, one in Column A and one in Column B. You are to compare the two quantities and on the answer sheet fill in oval

A if the quantity in Column A is greater;
B if the quantity in Column B is greater;
C if the two quantities are equal;
D if the relationship cannot be determined from the information given.

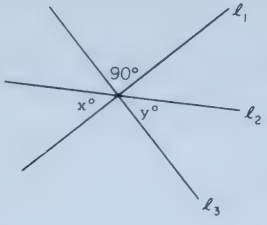

AN E RESPONSE WILL NOT BE SCORED.

EXAMPLES	Column A	Column B	Answers
E1.	2×6	$2 + 6$	● Ⓑ Ⓒ Ⓓ Ⓔ
E2.	$180 - x$	y	Ⓐ Ⓑ ● Ⓓ Ⓔ
E3.	$p - q$	$q - p$	Ⓐ Ⓑ Ⓒ ● Ⓔ

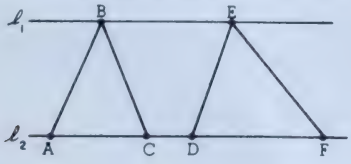

Notes:

1. In certain questions, information concerning one or both of the quantities to be compared is centered above the two columns.
2. In a given question, a symbol that appears in both columns represents the same thing in Column A as it does in Column B.
3. Letters such as x, n, and k stand for real numbers.

	Column A	Column B
8.	x^2	$x^2 + 1$
9.	3.9 X 4,756	4 X 4,756

10.	x + y	90
11.	$\frac{3}{5}$	60%
12.	The length of the hypotenuse of right ΔMNO	The length of side PQ of equilateral ΔPQR

$\ell_1 \parallel \ell_2$

13.	Length of the altitude of ΔABC drawn to side AC	Length of the altitude of ΔDEF drawn to side DF

	Column A	Column B
	$x + 2 > 3$	
14.	x + 1	2
15.	$\frac{39 + 12}{13 - 6}$	$\frac{39}{13} - \frac{12}{6}$

Assume the clock above is accurate with the hour hand pointing to 10.

16.	The number that the hour hand points to 6 hours after the time shown	The number that the hour hand points to 42 hours after the time shown

Tom bought x cans of tennis balls which come 3 to a can. He lost 1 unopened can of balls and 4 loose balls and then had 11 balls left.

17.	x	6

GO ON TO THE NEXT PAGE

SUMMARY DIRECTIONS FOR COMPARISON QUESTIONS

Answer: A if the quantity in Column A is greater;
B if the quantity in Column B is greater;
C if the two quantities are equal;
D if the relationship cannot be determined from the information given.

AN E RESPONSE WILL NOT BE SCORED.

	Column A	Column B
	$y = x + 3$ $z = x - 3$	
18.	y	z

	The sides of a triangle are of lengths 6, 6, and x.	
19.	6	x

	x and $\frac{72}{x}$ are both integers greater than 1.	
20.	Least possible value of $\frac{72}{x}$	4

21.	$\frac{21{,}951 - 27}{27}$	$\frac{21{,}951}{27} - 27$

	$x > 0$	
22.	$x^2 + 1$	$x^3 - 1$

	Column A	Column B
	 I II	
	Six squares of equal size form the figures above.	
23.	Perimeter of I	Perimeter of II

24.	0.1×0.1	$\frac{1}{200} + \frac{1}{200}$

	Rectangle R and parallelogram P have equal bases and areas. P is not a rectangle.	
25.	Perimeter of R	Perimeter of P

	x and y are positive and $xy = 2$.	
26.	$x + y$	3

	The remainder is 1 when integer b is divided by 2.	
27.	The remainder when b is divided by 4	1

Solve each of the remaining problems in this section using any available space for scratchwork. Then decide which is the best of the choices given and fill in the corresponding oval on the answer sheet.

28. Paul caught exactly 3 times as many fish as Eric and exactly 4 times as many as Steve. If they caught less than 100 fish altogether, what is the greatest number of fish that Paul could have caught?

(A) 72
(B) 66
(C) 60
(D) 50
(E) 48

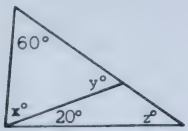

29. Each of the sides of the square above is divided into four equal segments. $\frac{\text{Area of shaded region}}{\text{Area of square}} =$

(A) $\frac{1}{4}$ (B) $\frac{3}{8}$ (C) $\frac{1}{2}$ (D) $\frac{5}{8}$ (E) $\frac{3}{4}$

30. If $\frac{5+\frac{3}{8}}{3+\frac{1}{4}} = \frac{10.75}{k}$, then $k =$

(A) 3.25
(B) 6.25
(C) 6.50
(D) 6.75
(E) 9.75

31. In the triangles above, what is the value of z in terms of x?

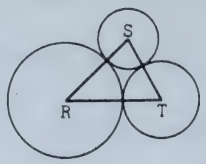

(A) $\frac{x}{2}$ (B) $x - 20$ (C) $x - 40$
(D) $80 - x$ (E) $100 - x$

32. If r and s are positive integers, how many integers are greater than rs and less than $r(s + 1)$?

(A) 1
(B) $s + 1$
(C) $s - 1$
(D) $r + 1$
(E) $r - 1$

33. If (x) represents πx^4, then the area of a circle of radius 4 is represented by

(A) (2) (B) (4) (C) (8)
(D) (16) (E) (16π)

34. In the figure above, the circles with centers R, S, and T have three points of contact as shown. What is the ratio of the perimeter of ΔRST to the sum of the circumferences of the three circles?

(A) $\frac{1}{2}$ (B) $\frac{1}{3}$ (C) $\frac{1}{\pi}$ (D) $\frac{1}{2\pi}$ (E) $\frac{1}{3\pi}$

35. A group of 15 people starting a business planned to share equally the total expense of P dollars. If k people dropped out, by how many dollars did each remaining person's share of the expense increase?

(A) $\frac{P}{15 - k}$
(B) $\frac{P}{15 - kP}$
(C) $\frac{P}{225 - 15k}$
(D) $\frac{kP}{15k - 225}$
(E) $\frac{kP}{225 - 15k}$

*Indicates four-choice questions. (All of the other questions are five-choice.)

The Scoring Process

Machine-scoring is done in three steps:

- *Scanning.* Your answer sheet is "read" by a scanning machine and the oval you filled in for each question is recorded on a computer tape.
- *Scoring.* The computer compares the oval filled in for each question with the correct response. Each correct answer receives one point; omitted questions do not count toward your score. For each wrong answer, a fraction of a point is subtracted to correct for random guessing. For questions with five answer choices, one-fourth of a point is subtracted for each wrong response; for questions with four answer choices, one-third of a point is subtracted for each wrong response. The SAT-verbal test has 85 questions with five answer choices each. If, for example, a student has 44 right, 32 wrong, and 9 omitted, the resulting raw score is determined as follows:

$$44 \text{ right} - \frac{32 \text{ wrong}}{4} = 44 - 8 = 36 \text{ raw score points}$$

Obtaining raw scores frequently involves the rounding of fractional numbers to the nearest whole number. For example, a raw score of 36.25 is rounded to 36, the nearest whole number. A raw score of 36.50 is rounded upward to 37.

- *Converting to reported scaled score.* Raw test scores are then placed on the College Board scale of 200 to 800 through a process that adjusts scores to account for minor differences in difficulty among different editions of the test. This process, known as equating, is performed so that a student's reported score is not affected by the edition of the test taken nor by the abilities of the group with whom the student takes the test. As a result of placing SAT scores on the College Board scale, scores earned by students at different times can be compared. For example, an SAT-verbal score of 400 on a test taken at one administration indicates the same level of developed verbal ability as a 400 score obtained on a different edition of the test taken at another time.

How to Score the Test

SAT-Verbal Sections 1 and 4

Step A: Count the number of correct answers for *section 1* and record the number in the space provided on the worksheet on the next page. Then do the same for the incorrect answers. (Do not count omitted answers.) To determine subtotal A, use the formula:

$$\text{number correct} - \frac{\text{number incorrect}}{4} = \text{subtotal A}$$

Step B: Count the number of correct answers and the number of incorrect answers for *section 4* and record the numbers in the spaces provided on the worksheet. To determine subtotal B, use the formula:

$$\text{number correct} - \frac{\text{number incorrect}}{4} = \text{subtotal B}$$

Step C: To obtain C, add subtotal A to subtotal B, keeping any decimals. Enter the resulting figure on the worksheet.

Step D: To obtain D, your raw verbal score, round C to the nearest whole number. (For example, any number from 44.50 to 45.49 rounds to 45.) Enter the resulting figure on the worksheet.

Step E: To find your reported SAT-verbal score, look up the total raw verbal score you obtained in step D in the conversion table on page 98. Enter this figure on the worksheet.

SAT-Mathematical Sections 2 and 5

Step A: Count the number of correct answers and the number of incorrect answers for *section 2* and record the numbers in the spaces provided on the worksheet. To determine the subtotal A, use the formula:

$$\text{number correct} - \frac{\text{number incorrect}}{4} = \text{subtotal A}$$

Step B: Count the number of correct answers and the number of incorrect answers for the *five-choice questions (questions 1 through 7 and 28 through 35) in section 5* and record the numbers in the spaces provided on the worksheet. To determine the subtotal B, use the formula:

$$\text{number correct} - \frac{\text{number incorrect}}{4} = \text{subtotal B}$$

Step C: Count the number of correct answers and the number of incorrect answers for the *four-choice questions (questions 8 through 27) in section 5* and record the numbers in the spaces provided on the worksheet. To determine the subtotal C, use the formula:

$$\text{number correct} - \frac{\text{number incorrect}}{3} = \text{subtotal C}$$

Step D: To obtain D, add subtotal A, subtotal B, and subtotal C, keeping any decimals. Enter the resulting figure on the worksheet.

Step E: To obtain E, your raw mathematical score, round D to the nearest whole number. (For example, any number from 44.50 to 45.49 rounds to 45.) Enter the resulting figure on the worksheet.

Step F: To find your reported SAT-mathematical score, look up the total raw mathematical score you obtained in E in the conversion table on page 98. Enter this figure on the worksheet.
