TEST 8—FORM CODE 5H

SECTION 1 Time—30 minutes 45 Questions

For each question in this section, choose the best answer and fill in the corresponding oval on the answer sheet.

Each question below consists of a word in capital letters, followed by five lettered words or phrases. Choose the word or phrase that is most nearly opposite in meaning to the word in capital letters. Since some of the questions require you to distinguish fine shades of meaning, consider all the choices before deciding which is best.

Example:

GOOD: (A) sour (B) bad (C) red (D) hot (E) ugly

Ⓐ ● Ⓒ Ⓓ Ⓔ

1. EXCLUDE: (A) admit (B) review (C) harden (D) make sound (E) make happy
2. SUBTERRANEAN: (A) empty (B) completed (C) inaudible (D) near water (E) above ground
3. ELONGATE: (A) melt (B) wind (C) confine (D) smooth (E) shorten
4. FOREMOST: (A) vacant (B) oldest (C) motionless (D) lowest in rank (E) impossible to restrain
5. DISINCLINATION: (A) anger (B) merriment (C) eagerness (D) humility (E) trepidation
6. OBSCURE: (A) formal (B) well-known (C) quick-witted (D) serene (E) voluntary
7. DISENTANGLE: (A) arouse (B) donate (C) soften (D) ascend (E) snarl
8. FISSION: (A) descent (B) reflection (C) saturation (D) lack of stability (E) process of joining
9. SUMPTUOUS: (A) legal (B) austere (C) isolated (D) gradual (E) authentic
10. DAUNT: (A) reassure (B) respect (C) simplify (D) entrap (E) correct
11. UNREMITTING: (A) subtle (B) imminent (C) sporadic (D) prodigious (E) sufficient
12. INDUCEMENT: (A) omission (B) exposure (C) impediment (D) exaggeration (E) misinterpretation
13. PALLIATE: (A) consult (B) distrust (C) rectify (D) defy (E) intensify
14. COPIOUS: (A) accidental (B) obvious (C) unpopular (D) meager (E) dubious
15. EUPHONY: (A) blasphemy (B) dissonance (C) dispersion (D) infirmity (E) autonomy

Each sentence below has one or two blanks, each blank indicating that something has been omitted. Beneath the sentence are five lettered words or sets of words. Choose the word or set of words that, when inserted in the sentence, best fits the meaning of the sentence as a whole.

Example:

Although its publicity has been ----, the film itself is intelligent, well-acted, handsomely produced, and altogether ----.

(A) tasteless. .respectable (B) extensive. .moderate (C) sophisticated. .amateur (D) risqué. .crude (E) perfect. .spectacular

● Ⓑ Ⓒ Ⓓ Ⓔ

16. In their too unwary innocence, the originators of this new methodology did not —— these difficulties, or doubtless they would have done something to head them off.

(A) permit (B) ignore (C) anticipate (D) obliterate (E) deprecate

17. Designed to resist storms by virtue of their —— weight, the oil platforms towed into the North Sea were the heaviest objects ever moved by human technology.

(A) inconsistent (B) purported (C) unstable (D) random (E) immense

18. Although of great potential benefit, many existing programs established to deal specifically with relations between police departments and local communities are decidedly ——.

(A) indispensable (B) ineffective (C) incorrupt (D) impressive (E) unrivaled

19. It may be true that creativity often emerges from struggle, but even so it is surprising that Akhmatova was able to grow so much as a poet while her —— was —— by the turmoil of the Russian Revolution.

(A) existence..enhanced
(B) innocence..matured
(C) reason..sacrificed
(D) life..buffeted
(E) thought..roused

20. Their conversation was unsettling, for the gravity of their topic contrasted so oddly with the —— of their tone.

(A) uniqueness (B) rapidity (C) lightness (D) precision (E) reverence

Each passage below is followed by questions based on its content. Answer the questions following each passage on the basis of what is stated or implied in that passage.

In the world today agriculture is not even tolerably productive unless it incorporates many goods and services produced in or transplanted from cities. Moreover, the most thoroughly urbanized countries are precisely those that produce food most abundantly.

Surges in agricultural productivity follow the growth of cities. Japanese cities began their modern industrial and commercial growth in the latter part of the nineteenth century, and by the Second World War Japan had become a highly urbanized country. Before the war, although Japanese farmers were industrious and used their land efficiently, neither they nor the city populations were well fed. Rice was the staff of life; for many Japanese there was little else except fish from the sea. Yet Japan did not raise enough rice for its own people, and a full quarter of what they consumed had to be imported. It was the custom to ascribe this severe food deficit to Japan's small supply of arable soil.

But after the war and during the 1950's, remarkable changes occurred in Japanese agriculture, changes that cannot be explained by catchwords like "reform"; indeed, the Japanese have made advances that have not been made in countries where reform of agriculture, landholding, and rural life have all been pursued more determinedly and heroically.

For the first time rural Japan began receiving vast amounts of fertilizers, machines, electric power, refrigeration equipment, the results of plant and animal research, and a host of other tangible goods and services developed in cities—the same cities where the richest food markets already lay.

As a result Japanese agriculture rapidly achieved a degree of productivity that had been thought unattainable. In 1960, although the population was twenty-five percent larger than it had been before the war and total consumption of rice had soared, Japanese farms were supplying all of Japan's rice; none had to be imported. Even more interesting, the per capita consumption of rice had dropped a little, but not because of shortages. Like the steady, long-term drop in starch consumption in the United States, the drop was caused by the availability of more abundant and varied food. The farmers, in addition to supplying more rice, were producing so much other food that the Japanese were not only eating more than before, they were eating better. Nowadays, when Japan imports food and pays for it with industrial products, the food imported is meat, not rice.

If modern Japanese cities had waited to grow until a surplus of rural products could support that growth, they would be waiting still. By basing rural productivity on a foundation of urban productivity, Japan accomplished rapidly what can also be done by other nations in both Asia and the rest of the world.

21. Which of the following statements best expresses the main idea of the passage?
    (A) A strong agricultural economy is an important prerequisite to the development of cities.
    (B) Japanese agriculture developed rapidly in the years following the Second World War because of a reduced dependence on rice.
    (C) Urban progress provides a sound foundation for agricultural productivity.
    (D) A decrease in national starch consumption is an indicator of an improved balance of trade.
    (E) Urban industrial centers provide the largest markets for rural agricultural products.

22. Which of the following does the author list among the contributions of the city to agricultural advancement?
    I. Research
    II. A large labor force
    III. Industrial products
    (A) I only (B) II only (C) III only (D) I and III only (E) I, II, and III

23. Which of the following statements about the American diet can be inferred from the passage?
    (A) Starch has not always accounted for as small a share of the American diet as it does today.
    (B) Japanese food is becoming increasingly popular in the United States.
    (C) Urban industry has contributed to the consumption of rice and potatoes in the United States.
    (D) Americans eat a wide variety of foods because of their varied ethnic heritages.
    (E) Agricultural diversity is responsible for the popularity of canned and frozen foods in the United States.

24. Which of the following is NOT cited in the passage as evidence of Japan's agricultural growth?
    (A) A drop in the per capita consumption of rice
    (B) An increase in the amount of rice produced on Japanese farms
    (C) The end of Japan's dependence on imported rice
    (D) The production of foodstuffs other than rice
    (E) The end of Japan's importation of food

25. In the passage, the author makes the central point primarily by
    (A) posing a series of rhetorical questions
    (B) developing fully a single example
    (C) citing statistics from a variety of disciplines
    (D) quoting the ideas of noted economists and historians
    (E) criticizing holders of opposing points of view

The reading passages in this test are brief excerpts or adaptations of excerpts from published material. The ideas contained in them do not necessarily represent the opinions of the College Board or Educational Testing Service. To make the text suitable for testing purposes, we may in some cases have altered the style, contents, or point of view of the original.

GO ON TO THE NEXT PAGE

Mr. and Mrs. Veneering were bran-new people in a bran-new house in a bran-new quarter of London. Everything about the Veneerings was spick and span new. In the Veneering establishment, from the hall-chairs with the new coat of arms, to the grand piano-forte with the new action, and upstairs again to the new fire-escape, all things were in a state of high varnish and polish. And what was observable in the furniture, was observable in the Veneerings—the surface smelt a little too much of the workshop and was a trifle sticky.

There was an innocent piece of dinner-furniture that was kept over a livery stableyard in Duke Street, Saint James's, when not in use. The name of this article was Twemlow. Being first cousin to Lord Snigsworth, he was in frequent requisition, and at many houses might be said to represent the dining-table in its normal state. Mr. and Mrs. Veneering, for example, arranging a dinner, habitually started with Twemlow, and then put leaves in him, or added guests to him. Sometimes, the table consisted of Twemlow and half-a-dozen leaves; sometimes, of Twemlow and a dozen leaves; sometimes, Twemlow was pulled out to his utmost extent of twenty leaves.

The Veneerings were a source of utter confusion to Twemlow. The abyss to which he could find no bottom, and from which started forth the engrossing and ever-swelling difficulty of his life, was the insoluble question whether he was Veneering's oldest friend, or newest friend. Twemlow had first known Veneering at his club, where Veneering then knew nobody but the man who made them known to one another, who seemed to be the most intimate friend he had in the world, and whom he had known two days—the bond of union between their souls, the nefarious conduct of the committee respecting the cookery of a fillet of veal, having been accidentally cemented at that date. Immediately upon this, Twemlow received an invitation to dine with the man, and dined: Veneering being of the party. At the man's were a Member, an Engineer, a Payer-off of the National Debt, a Poem on Shakespeare, a Grievance, and a Public Office, who all seemed to be utter strangers to Veneering. And yet immediately after that, Twemlow received an invitation to dine at Veneering's, expressly to meet the Member, the Engineer, the Payer-off of the National Debt, the Poem on Shakespeare, the Grievance, and the Public Office, and, dining, discovered that all of them were the most intimate friends Veneering had in the world, and that the wives of all of them (who were all there) were the objects of Mrs. Veneering's most devoted affection and tender confidence.

26. By comparing Twemlow to a "piece of dinner-furniture" (line 12), the author creates the impression that
    (A) those who invite Twemlow have little regard for him as an individual
    (B) the Veneerings and their friends warmly accept Twemlow as a member of their families
    (C) the Veneerings feel that Twemlow is socially inferior to them
    (D) Twemlow's manner and appearance are stiff and formal
    (E) Twemlow is pathetically grateful for the many invitations he receives

27. From the information given in the passage, it can be inferred that the Veneerings were impressed by Twemlow because of
    (A) the genuineness of his humility
    (B) the wit and intelligence of his conversation
    (C) his connection with a socially prestigious person
    (D) his loneliness and need for social contact
    (E) his appreciation of their efforts on his behalf

28. The author indicates that Twemlow reacts to the Veneerings with
    (A) total bewilderment
    (B) open appreciation
    (C) begrudging admiration
    (D) passing curiosity
    (E) strong contempt

29. From the information in the passage, which of the following can be inferred about the guests at the dinner party described in lines 44-53 ?
    (A) They all worked on similar projects.
    (B) They had recently been guests at a party at Twemlow's.
    (C) The wives disliked Mrs. Veneering.
    (D) They had only recently met the Veneerings.
    (E) Their friendship with Twemlow had lasted several years.

30. According to the passage, the friendship between Veneering and the man who introduced Veneering to Twemlow was based on a mutual
    (A) regard for each other's accomplishments
    (B) interest in fine furniture and interior design
    (C) loyalty toward the club to which they belonged
    (D) responsibility for overseeing the preparation of food at the club
    (E) disapproval of the preparation of certain food at the club

GO ON TO THE NEXT PAGE

1 1 1 1 1 1 1 1 1 1 1 1

Select the word or set of words that best completes each of the following sentences.

31. In order to have ---- the water and then be able to return easily to the surface to breathe, the seal ---- breaks in the ice produced by wind, tides, and currents.

(A) use of..glides over
(B) protection from..covers over
(C) desire for..shrinks from
(D) freedom from..dives into
(E) access to..depends on

32. Demographers and anthropologists have corrected the notion that European explorers in North America entered a ---- territory by showing that the land in some areas was already as densely ---- as parts of Europe.

(A) fertile..settled
(B) colossal..wooded
(C) desolate..populated
(D) valuable..exploited
(E) hostile..concentrated

33. The first time that I met her, she was so ---- that she seemed more ---- than the alert and vivacious woman she was reputed to be.

(A) learned..an aesthete
(B) exultant..a stoic
(C) abstracted..a somnambulist
(D) mesmerizing..an activist
(E) witty..an intellectual

34. All forms of solidarity, insofar as they imply preconceived codes obediently followed, ---- the passion for ---- and freedom inherent in modern artistic creation.

(A) violate..spontaneity
(B) expose..fervor
(C) satisfy..nonchalance
(D) deny..authority
(E) kindle..compliance

35. Currently rising temperatures in the Arctic and Antarctic are ---- of a still warmer world that could result from an excess of atmospheric carbon dioxide produced by the burning of oil, gas, and coal.

(A) polarities (B) harbingers (C) vestiges (D) counterexamples (E) aftereffects

Each question below consists of a related pair of words or phrases, followed by five lettered pairs of words or phrases. Select the lettered pair that best expresses a relationship similar to that expressed in the original pair.

Example:

YAWN:BOREDOM :: (A) dream:sleep (B) anger:madness (C) smile:amusement (D) face:expression (E) impatience:rebellion

Ⓐ Ⓑ ● Ⓓ Ⓔ

36. FLASK:LIQUOR :: (A) cube:ice (B) pencil:paper (C) tank:oxygen (D) bottle:glass (E) grain:beer

37. PLANET:SOLAR SYSTEM :: (A) sun:star (B) galaxy:universe (C) orbit:sky (D) asteroid:comet (E) moon:night

38. CHIMNEY:SMOKE :: (A) horn:fog (B) gate:fence (C) tinder:fire (D) gutter:water (E) bank:snow

39. ORDAIN:MINISTER ::
(A) inaugurate:president
(B) nominate:candidate
(C) esteem:monarch
(D) acquiesce:authority
(E) extol:champion

40. CONTUSION:SKIN :: (A) antiseptic:wound (B) transfusion:blood (C) diagnostic:health (D) contagion:flu (E) concussion:brain

41. SMORGASBORD:MEAL ::
(A) carousel:child (B) anthology:book (C) entrée:menu (D) collage:artist (E) article:magazine

42. SLEEP:FITFUL ::
(A) mood:buoyant (B) performance:erratic (C) speech:brief (D) dream:fanciful (E) knowledge:extensive

43. TACITURN:TALK :: (A) arbitrary:decide (B) itinerant:journey (C) indolent:work (D) imprudent:argue (E) harmful:injure

44. STUPEFY:TORPOR ::
(A) exhaust:frenzy (B) perplex:quandary (C) amuse:convulsion (D) rescue:jeopardy (E) condescend:superiority

45. SALVAGE:DESTRUCTION ::
(A) commemorate:value
(B) dismantle:removal
(C) preserve:defense
(D) smuggle:permission
(E) conceal:scrutiny

IF YOU FINISH BEFORE TIME IS CALLED, YOU MAY CHECK YOUR WORK ON THIS SECTION ONLY. DO NOT TURN TO ANY OTHER SECTION IN THE TEST. **STOP**

SECTION 2 Time—30 minutes, 25 Questions

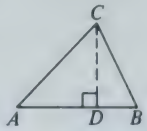

In this section solve each problem, using any available space on the page for scratchwork. Then decide which is the best of the choices given and fill in the corresponding oval on the answer sheet.

The following information is for your reference in solving some of the problems.

Circle of radius r: Area $= \pi r^2$; Circumference $= 2\pi r$
The number of degrees of arc in a circle is 360.
The measure in degrees of a straight angle is 180.

Definition of symbols:

$=$ is equal to	$\leqq$ is less than or equal to
$\neq$ is unequal to	$\geqq$ is greater than or equal to
$<$ is less than	$\parallel$ is parallel to
$>$ is greater than	$\perp$ is perpendicular to

Triangle: The sum of the measures in degrees of the angles of a triangle is 180.
If $\angle CDA$ is a right angle, then

(1) area of $\triangle ABC = \frac{AB \times CD}{2}$

(2) $AC^2 = AD^2 + DC^2$

Note: Figures that accompany problems in this test are intended to provide information useful in solving the problems. They are drawn as accurately as possible EXCEPT when it is stated in a specific problem that its figure is not drawn to scale. All figures lie in a plane unless otherwise indicated. All numbers used are real numbers.

1. A letter is defined as being "foldable" if it is symmetric with respect to its horizontal midline. For example, the three letters below are "foldable" because they are symmetric with respect to the midlines shown.

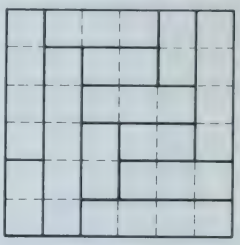

Each of the following letters is "foldable" EXCEPT

(A)  (B)  (C)  (D)  (E) 

$$x + y + z = 6$$
$$2y + z = 7$$

2. In the equations above, if $z = 1$, then $x =$

(A) -1 (B) 1 (C) 2 (D) 3 (E) 5

3. In the figure above, twelve rectangles (outlined by solid lines) are arranged to form a 6-by-6 square as shown. If the same rectangles were connected, without overlapping, to form a strip of width 1 unit, the strip would be how many units long?

(A) 12 (B) 18 (C) 24 (D) 30 (E) 36

4. $\frac{1}{1{,}000} + \frac{3}{10} + \frac{5}{100} =$

(A) 0.135 (B) 0.153 (C) 0.315
(D) 0.351 (E) 0.531

5. If $n = 10$, which of the following has the least value?

(A) $2 - n$ (B) $n - 2$ (C) $\frac{2}{n}$
(D) $\frac{n}{2}$ (E) $\frac{n}{2} - 2$

GO ON TO THE NEXT PAGE

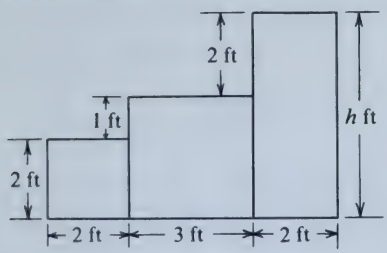

6. A certain company makes a total of 96 ski vests a day in sizes small, medium, and large. If the number of vests in the small and large sizes combined is equal to the number of vests in the medium size, what is the daily production of vests in the medium size?

(A) 23
(B) 24
(C) 28
(D) 32
(E) 48

7. On a rectangular coordinate graph, which of the following points would be the same distance from the origin as (2, 0) ?

I. (0, 2)
II. (−2, 0)
III. (1, 1)

(A) I only
(B) III only
(C) I and II only
(D) I and III only
(E) I, II, and III

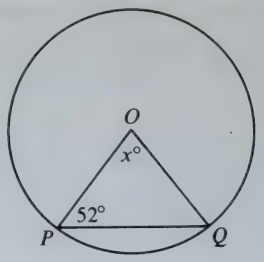

8. The rectangles above represent three cut tree trunks arranged with trunks perpendicular to the ground to form "stairs." What is the value of h, in feet?

(A) 5 (B) 6 (C) 7 (D) 10 (E) 12

9. Of the 35 students in a certain homeroom, 20 joined the math club. Of these 20 students, $\frac{3}{5}$ were females. What was the number of female students in the homeroom?

(A) 12
(B) 15
(C) 18
(D) 21
(E) It cannot be determined from the information given.

10. In the figure above, if O is the center of the circle, then $x =$

(A) 70 (B) 72 (C) 74 (D) 76 (E) 78

11. Each of the line segments in the figure above is the perpendicular bisector of the other. If the figure is rotated in the same plane 180° clockwise about the point of intersection of the segments, the resulting figure will look like which of the following?

(A) 

(B) 

(C) 

(D) 

(E) 

GO ON TO THE NEXT PAGE

12. $(-2a)^3 =$

(A) $-8a$ (B) $8a^3$ (C) $-2a^3$
(D) $-8(-a)^3$ (E) $-8a^3$

13. Which of the following can be expressed as the product of two consecutive even integers?

(A) 24 (B) 36 (C) 42 (D) 60 (E) 72

14. Martin and Alice buy newspapers for \$0.20 each and sell them for \$0.25 each. If, at the end of one week, Martin made a profit of \$12.60 and Alice made a profit of \$18.75, how many more papers did Alice sell than Martin?

(A) 125
(B) 123
(C) 63
(D) 62
(E) 43

15. The volume of solid X is $\frac{4}{3}\pi w^3$ and the volume of solid Y is $2\pi w^3$. The volume of solid X is what percent of the volume of solid Y?

(A) $33\frac{1}{3}\%$
(B) 50%
(C) $66\frac{2}{3}\%$
(D) 75%
(E) $133\frac{1}{3}\%$

16. The operation Δ is defined for particular values a, b, and c by the equations $a \Delta b = 2$ and $2 \Delta c = 5$. For these values of a, b, and c, the expression $(a \Delta b) \Delta c$ is equal to

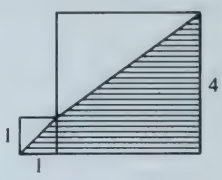

(A) 3
(B) 4
(C) 5
(D) 7
(E) 10

17. There are 5 locked doors and 3 keys. Each key opens one and only one door, and no two keys open the same door. Sam chooses a key, and tries it on different doors until he opens one. Leaving that door open, he repeats this process with the next key, and then the next, until three doors are open. If x is the total number of attempts, both successful and unsuccessful, to open these doors, what are the minimum and maximum possible values of x?

(A) 3 and 5
(B) 3 and 12
(C) 3 and 15
(D) 5 and 12
(E) 5 and 15

18. If x and y are integers and $\frac{x}{y} = \frac{2}{7}$, then $(x + y)$ could equal each of the following EXCEPT

(A) -9 (B) 27 (C) 45
(D) 56 (E) 117

19. In the figure above, a square with side of length 1 and a square with side of length 4 are placed as shown. What is the area of the shaded region?

(A) $8\frac{1}{2}$ (B) 10 (C) $10\frac{1}{4}$ (D) $10\frac{1}{2}$ (E) 12

20. If x is an integer and the product $x(x + 1)(x + 2)$ is negative, then the greatest possible value for x is

(A) -4 (B) -3 (C) -2 (D) -1 (E) 1

GO ON TO THE NEXT PAGE

21. The first two terms in a sequence are 2 and 4. The third term and all successive terms are generated by taking the average (arithmetic mean) of all the preceding terms. For example, the third term is 3, which is the average of 2 and 4. What is the sixth term of the sequence?

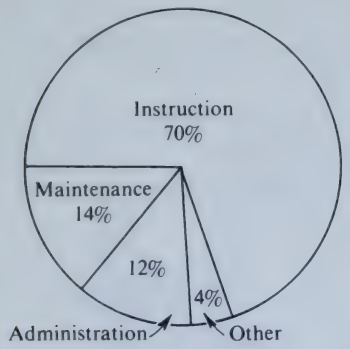

(A) $7\frac{1}{2}$

(B) 6

(C) $3\frac{1}{2}$

(D) 3

(E) $2\frac{1}{2}$

22. The graph above gives the breakdown of expenditures in school district X last year. If the cost of maintenance had been 50 percent less and the amount saved had been applied to instruction, then the increase in the expenditures for instruction would be what percent of the actual expenditures for instruction?

(A) 3.5% (B) 7% (C) 10%

(D) 20% (E) 50%

Note: Figure not drawn to scale.

23. In the figure above, the solid line shows the aerial view of a 15-mile path on which a race is run. If the radius r of the semicircular path is $\frac{2}{\pi}$ miles, how many miles long is the straight portion of the path?

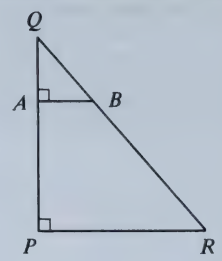

(A) 11 (B) 13 (C) $15 - 2\pi$

(D) $15 - \frac{2}{\pi}$ (E) $15 - \frac{8}{\pi}$

24. If $n = (11^7 \times 2) + (11^7 \times 4) + (11^7 \times 6)$, which of the following is NOT a whole number?

(A) $\frac{n}{2}$ (B) $\frac{n}{3}$ (C) $\frac{n}{2} - \frac{n}{3}$

(D) $\frac{n^2}{6}$ (E) $\frac{n+6}{12}$

25. In the figure above, the area of $\triangle PQR = 54$. If $AQ = \frac{1}{3}PQ$ and $AB = \frac{1}{3}PR$, what is the area of $\triangle AQB$?

(A) 6 (B) 9 (C) 17 (D) 18

(E) It cannot be determined from the information given.

IF YOU FINISH BEFORE TIME IS CALLED, YOU MAY CHECK YOUR WORK ON THIS SECTION ONLY. DO NOT TURN TO ANY OTHER SECTION IN THE TEST. **STOP**

SECTION 5 Time—30 minutes 40 Questions

For each question in this section, choose the best answer and fill in the corresponding oval on the answer sheet.

Each question below consists of a word in capital letters, followed by five lettered words or phrases. Choose the word or phrase that is most nearly opposite in meaning to the word in capital letters. Since some of the questions require you to distinguish fine shades of meaning, consider all the choices before deciding which is best.

Example:

GOOD: (A) sour (B) bad (C) red (D) hot (E) ugly

Ⓐ ● Ⓒ Ⓓ Ⓔ

1. CONTAMINATE: (A) lubricate (B) regulate (C) make pure (D) make available (E) make known
2. TURBULENCE: (A) originality (B) longevity (C) roundness (D) stillness (E) closeness
3. EXQUISITE: (A) perishable (B) independent (C) contemporary (D) sudden and unexpected (E) crude and unattractive
4. UNDERPLAY: (A) emphasize boldly (B) overlook accidentally (C) reduce temporarily (D) compete fairly (E) refuse to accept
5. MOROSE: (A) reserved (B) lovable (C) virtuous (D) jolly (E) patient
6. RAIL AT: (A) imitate (B) compliment (C) assign responsibility (D) alter abruptly (E) banish permanently
7. ADAMANCY: (A) effectiveness (B) pliancy (C) suspicion (D) vitality (E) intricacy
8. EXACTING: (A) indulgent (B) false (C) numerous (D) beneficial (E) unpopular
9. STASIS: (A) hindrance (B) organization (C) fluctuation (D) barrenness (E) spaciousness
10. PERFUNCTORY: (A) painstaking (B) disconcerting (C) conforming (D) penitent (E) artificial

Each sentence below has one or two blanks, each blank indicating that something has been omitted. Beneath the sentence are five lettered words or sets of words. Choose the word or set of words that, when inserted in the sentence, best fits the meaning of the sentence as a whole.

Example:

Although its publicity has been ----, the film itself is intelligent, well-acted, handsomely produced, and altogether ----.

(A) tasteless. .respectable (B) extensive. .moderate (C) sophisticated. .amateur (D) risqué. .crude (E) perfect. .spectacular

● Ⓑ Ⓒ Ⓓ Ⓔ

11. Scent glands vary widely in the —— of their structure, but there is a basic —— that can be traced in all of them.
    (A) details..pattern
    (B) vividness..consideration
    (C) uniformity..difference
    (D) dimensions..size
    (E) intensity..discrepancy
12. Austin is almost too gentle, too ——, to give his analyses the necessary hard edges and —— conclusions.
    (A) blunt..forthright
    (B) tentative..firm
    (C) thorough..lukewarm
    (D) creative..imaginative
    (E) uncompromising..predictable
13. She protested that a foreign policy subject to momentary political passions, veering sharply with elections and ---- to overnight repudiation, would be useless because of its ----.
    (A) indifferent..impartiality
    (B) inclined..conservatism
    (C) liable..inflexibility
    (D) immune..inadequacy
    (E) vulnerable..inconsistency

14. When Voltaire called Shakespeare "barbaric," he was making a criticism that is today often ---- by the English as typical of Voltaire's lack of taste; but most Englishmen in the eighteenth century ---- Voltaire.
    (A) mocked..protested against
    (B) defended..sympathized with
    (C) refuted..contended with
    (D) cited..agreed with
    (E) rejected..scoffed at

15. To refer to the ability to wreak catastrophic destruction and kill hundreds of thousands of people as "nuclear capability" is to indulge in ----.
    (A) invective (B) didacticism
    (C) hyperbole (D) euphemism
    (E) pessimism

Each question below consists of a related pair of words or phrases, followed by five lettered pairs of words or phrases. Select the lettered pair that best expresses a relationship similar to that expressed in the original pair.

Example:

YAWN : BOREDOM :: (A) dream : sleep
(B) anger : madness (C) smile : amusement
(D) face : expression (E) impatience : rebellion

Ⓐ Ⓑ ● Ⓓ Ⓔ

16. CHECKMATE:CHESS:: (A) kickoff:football
    (B) serve:tennis (C) error:baseball
    (D) hurdle:track (E) knockout:boxing

17. SCAR:INJURY:: (A) ointment:burn
    (B) cut:blood (C) stain:spill
    (D) cork:bottle (E) ice:water

18. EPITAPH:TOMBSTONE:: (A) clapper:bell
    (B) mural:wall (C) parable:moral
    (D) portrait:vista (E) metaphor:dream

19. ACCOMPLICE:CRIMINAL::
    (A) tenant:landlord
    (B) negotiator:invader
    (C) spectator:daredevil
    (D) passenger:pilot
    (E) colleague:worker

20. THIMBLE:FINGER:: (A) armor:body
    (B) crown:head (C) torso:waist
    (D) earring:ear (E) stocking:leg

21. DIRGE:MOURNER:: (A) march:composer
    (B) mercy:hostage (C) hymn:worshiper
    (D) course:runner (E) lyric:conductor

22. PINNACLE:LOFTY::
    (A) avalanche:dangerous
    (B) promontory:windy
    (C) plateau:variable
    (D) precipice:steep
    (E) foothill:surmountable

23. PRESUMPTUOUS:CONFIDENCE::
    (A) cunning:bravery
    (B) curious:knowledge
    (C) fanatic:enthusiasm
    (D) tedious:fascination
    (E) tiresome:energy

24. CAUCUS:MEETING::
    (A) platform:convention
    (B) issue:election
    (C) invocation:prayer
    (D) budget:defense
    (E) government:politics

25. IMPECUNIOUS:MONEY::
    (A) talented:effort
    (B) wanton:haste
    (C) clandestine:intention
    (D) despondent:hope
    (E) compulsive:ambition

Each passage below is followed by questions based on its content. Answer the questions following each passage on the basis of what is stated or implied in that passage.

Lois Mailou Jones is one example of an answer to the charge that there are no Black or female American artists to include in art history textbooks and classes. Beginning her formal art education at the School of the Museum of Fine Arts in Boston, Lois Jones found herself strongly attracted to design rather than fine arts. After teaching for a while, she went to Paris to study, on the advice of the sculptor Meta Warrick Fuller.

It was in Paris that she first felt free to paint. Following her return to this country in 1938, Jones had an exhibit at the Vose Gallery in Boston, a major breakthrough for a Black artist at that time. Her work during this period consisted of excellent impressionist scenes of Paris. It was not until the early 1940's, after she met the Black aesthetician Alain Locke, that she began to paint works like *Mob Victim*, which explicitly dealt with her own background as a Black American. Later, in the fifties, she went often to Haiti, which had yet another influence on her style. Then a sabbatical leave in Africa again changed her imagery. Indeed, the scope of this distinguished artist's career so well spans the development of twentieth-century art that her work could be a textbook in itself.

26. The passage primarily focuses on the

(A) influence of Lois Jones on other artists
(B) recognition given to Lois Jones for her work
(C) experiences that influenced the work of Lois Jones
(D) obstacles that Lois Jones surmounted in her career
(E) techniques that characterize the work of Lois Jones

27. Which of the following best summarizes the relationship of the first sentence to the rest of the passage?

(A) Assertion followed by supporting evidence
(B) Challenge followed by debate pro and con
(C) Prediction followed by analysis
(D) Specific instance followed by generalizations
(E) Objective reporting followed by personal reminiscences

28. It can be inferred from the passage that Alain Locke encouraged Lois Jones to

(A) exhibit her work at recognized galleries
(B) use her experiences as a Black American in her work
(C) incorporate Haitian imagery in her work
(D) work in art media other than painting
(E) continue her studies abroad

Some of the ridges of beach grass that I saw were planted by the government many years ago to preserve the harbor of Provincetown and the extremity of Cape Cod. My guidebook indicated that, during the spring and summer, beach grass grows about two and a half feet. If the grass is surrounded by naked beach, the storms of autumn and winter heap up the sand on all sides, causing it to rise nearly to the top of the plant. In the spring the grass sprouts anew and is again covered with sand during the winter. Thus a ridge continues to ascend as long as there is a sufficient base to support it, or till the surrounding sand, also covered with beach grass, will no longer yield to the force of the winds.

Sand hills formed in this way are sometimes one hundred feet high, shift continually, and assume many shapes, resembling snowdrifts, or desert tents. The grass is very firmly rooted. When I endeavored to pull some grass up, it usually broke off ten or twelve inches below the surface of the sand, at what had been the surface the year before, as was indicated by the numerous offshoots there. The grass had a straight, round shoot and showed by its length how much sand had accumulated that year. Sometimes the dead stubs of a previous season came up with it from deeper in the sand, with their own more decayed shoot attached. The age of a sand hill, and its annual rate of increase, are recorded by these grass shoots with a fair degree of accuracy.

29. The author's primary purpose in the passage is to

(A) describe the beauty of the Cape Cod sand hills
(B) warn against the danger of allowing sand hills to spread
(C) describe the process by which the Cape Cod sand hills were formed
(D) present an original scientific discovery
(E) complain about the planting of beach grass

30. It can be inferred from the passage that a piece of grass pulled by hand from a sand hill would provide information about which of the following?

I. Length that the grass grew in the previous year
II. Total height of the sand hill
III. Accumulation of sand during the previous year

(A) I only
(B) III only
(C) I and II only
(D) I and III only
(E) I, II, and III

GO ON TO THE NEXT PAGE

31. As described in the passage, the interaction between sand and beach grass is most similar to the interaction between

(A) wind-blown snow and a fence
(B) drifting logs and a river
(C) heavy surf and a concrete jetty
(D) a stiff breeze and a high cliff
(E) a sled and a snow-covered hill

32. The author's viewpoint is primarily that of a

(A) botanist who hopes to identify new plants
(B) historian who tries to record the past
(C) sightseer who is mystified by nature
(D) researcher who seeks to disprove a theory
(E) visitor who is curious about nature

It would be mistaken, as well as uncharitable, to imagine that the men and women who from time to time carry the banners of anti-intellectualism are
Line (5) of necessity committed to it as though it were some positive creed or a kind of principle. They are not in most cases wholly dedicated to denying the merit of rational thought; they are not categorically hostile to ideas. To be confronted with a simple and unqualified evil is no doubt a kind of luxury, but (10) such is not the case here; and if anti-intellectualism has become, as I believe it has, a broadly diffused quality in our civilization, it has become so because it has often been linked to good, or at least defensible, causes. Anti-intellectualism first got its strong (15) grip on our ways of thinking because it was fostered by an evangelical religion that also purveyed many humane and democratic sentiments. It made its way into our politics because it became associated with our passion for equality. It has (20) become formidable in our education partly because our educational beliefs are evangelically egalitarian.

Hence, as far as possible, our anti-intellectualism must be excised from the benevolent impulses upon which it lives by constant and (25) delicate acts of intellectual surgery. The benevolent impulses themselves must be preserved. Only in this way can anti-intellectualism be checked and contained; I do not say eliminated altogether, for I believe not only that this is beyond our powers but (30) also that an unbridled passion for the total elimination of this or that evil can be as dangerous as any of the delusions of our time.

33. The author recommends which of the following to those who would control anti-intellectualism?

(A) Probing self-examination on the part of all citizens
(B) Gentle suppression of our benevolent impulses
(C) Elimination of anti-intellectuals from positions of power
(D) Resigned compromise on the part of intellectuals
(E) Careful separation of anti-intellectualism from its commendable motives

34. The metaphor used in the second paragraph to describe the author's solution is drawn from

(A) law
(B) politics
(C) medicine
(D) theology
(E) athletics

35. It can be inferred that the author believes that confronting a "simple and unqualified evil" (lines 8-9) is a "luxury" because it

(A) costs society a great price
(B) provides an obvious and easy target
(C) is generally alluring at first glance
(D) is associated with obvious extravagance
(E) can be afforded by only a very few

GO ON TO THE NEXT PAGE

In the twentieth century, physicists have found explanations for many phenomena that were previously observed but not understood, such as the stability of atoms over millions of years. In turn, the theories that explain these phenomena have also given us important new perspectives on other phenomena that formerly had been thought to be completely understood, such as the behavior of light and the motion of planetary bodies. In addition, physicists have been led by these theories to the discovery of qualitatively new phenomena, such as the transmutation of chemical elements and the creation and annihilation of subatomic particles.

As this progress has taken place, the very ideas that physicists have of nature have been replaced by radical new concepts. Both the quantum theory and the special and general theories of relativity are examples of such new scientific perspectives. Physicists have been led to these new descriptions of phenomena through a combination of experimentation, observation, and mathematical reasoning, and they have come to accept the truth of the descriptions. The new theories, however, have often seemed strange and incomprehensible to nonphysicists, including those who are familiar with the earlier descriptions offered by Newtonian physics. It is perhaps inevitable that in the early stages of any scientific revolution new principles should appear strange to most outsiders. This was the case with Newtonian physics: when it was proposed in the seventeenth century, it was denounced as unreasonable even by other leading physicists such as Gottfried Leibniz. However, more than fifty years have now passed since the quantum theory was given its definitive form—surely a long enough time that novelty should no longer act as a bar to the comprehension of this theory by nonphysicists. By contrast, in the arts, the ideas of fifty years ago, far from being considered too novel to comprehend, are generally thought to be old and hackneyed. Why, then, does a more widespread understanding of modern physics not exist?

One explanation may be that the concepts introduced by physicists to explain phenomena are often quite different from anything that can be deduced from observation of everyday occurrences. According to the theory of relativity, the length of a second as measured by a clock varies with the speed of the clock as it travels through space. This phenomenon is not observable in ordinary experience, and thus it is not surprising that nonphysicists have often found such ideas strange and confusing. In fact, many physicists were slow to accept the relativity theory and the quantum theory when they were first proposed because of the way these theories account for ordinary and extraordinary experiences, and because the new ideas differed so markedly from previously held concepts in physics.

36. According to the passage, before the twentieth century, physicists assumed that they completely understood which of the following?

    I. The behavior of light
    II. The transmutation of chemical elements
    III. The stability of atoms over millions of years

    (A) I only
    (B) III only
    (C) I and II only
    (D) I and III only
    (E) I, II, and III

37. Which of the following does the author consider to be accomplishments of twentieth-century physics?

    I. Explanations of previously observed phenomena
    II. Clarifications of phenomena previously thought to be completely understood
    III. Discoveries of new phenomena

    (A) I only
    (B) III only
    (C) I and II only
    (D) I and III only
    (E) I, II, and III

38. According to the author, ideas that were developed in the arts at approximately the same time as the quantum theory was formulated are now considered

    (A) trite
    (B) prophetic
    (C) illogical
    (D) classic
    (E) eccentric

GO ON TO THE NEXT PAGE

39. In the final paragraph, the author's attitude toward those nonphysicists who fail to understand twentieth-century physics is best described as one of

(A) impatience
(B) disappointment
(C) indifference
(D) perplexed curiosity
(E) sympathetic tolerance

40. Which of the following best states the central idea of the passage?

(A) Twentieth-century physicists have made marvelous strides in discovering explanations for a wide variety of phenomena.
(B) Twentieth-century physics has introduced radically new concepts that are not widely understood.
(C) The important new perspectives of modern physics should be learned by all educated people.
(D) Advances in modern physics are occurring at so rapid a pace that neither physicists nor nonphysicists can understand them.
(E) The evidence supporting Newtonian physics is not encountered in ordinary experience.

IF YOU FINISH BEFORE TIME IS CALLED, YOU MAY CHECK YOUR WORK ON THIS SECTION ONLY. DO NOT TURN TO ANY OTHER SECTION IN THE TEST. **STOP**

SECTION 6 Time—30 minutes, 35 Questions

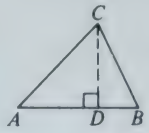

In this section solve each problem, using any available space on the page for scratchwork. Then decide which is the best of the choices given and fill in the corresponding oval on the answer sheet.

The following information is for your reference in solving some of the problems.

Circle of radius r: Area $= \pi r^2$; Circumference $= 2\pi r$
The number of degrees of arc in a circle is 360.
The measure in degrees of a straight angle is 180.

Definition of symbols:

$=$ is equal to	$\leqq$ is less than or equal to
$\neq$ is unequal to	$\geqq$ is greater than or equal to
$<$ is less than	$\parallel$ is parallel to
$>$ is greater than	$\perp$ is perpendicular to

Triangle: The sum of the measures in degrees of the angles of a triangle is 180.
If $\angle CDA$ is a right angle, then
(1) area of $\triangle ABC = \frac{AB \times CD}{2}$
(2) $AC^2 = AD^2 + DC^2$

Note: Figures that accompany problems in this test are intended to provide information useful in solving the problems. They are drawn as accurately as possible EXCEPT when it is stated in a specific problem that its figure is not drawn to scale. All figures lie in a plane unless otherwise indicated. All numbers used are real numbers.

1. $2(9 + 6) - 4(10 \div 2) =$

(A) 10 (B) 5 (C) 4 (D) -5 (E) -10

2. How many revolutions are made in 5 minutes by a fan that makes 30 revolutions per second?

(A) 900 (B) 1,500 (C) 1,800
(D) 5,400 (E) 9,000

3. A baker's dozen contains 13 items. A normal dozen contains 12 items. How many normal dozens contain as many items as 12 baker's dozens?

(A) 12 (B) $12\frac{1}{2}$ (C) 13
(D) 14 (E) $15\frac{1}{3}$

4. A rope is coiled 4 times as shown in the figure above. If a cut is made through the rope along the dotted line segment shown, into how many pieces will the rope be cut?

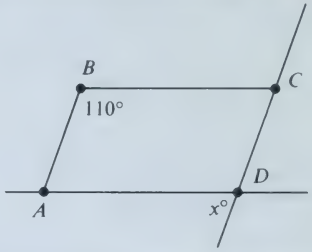

(A) Two (B) Four (C) Five
(D) Six (E) Eight

5. If the average (arithmetic mean) of four numbers is 37 and the average of two of these numbers is 33, what is the average of the other two numbers?

(A) 35
(B) 39
(C) 40
(D) 41
(E) 43

6. Which of the following is NOT equal to $\frac{1}{2}$ of an integer?

(A) $\frac{1}{4}$ (B) $\frac{1}{2}$ (C) 1 (D) $\frac{3}{2}$ (E) 2

7. In the figure above, $ABCD$ is a parallelogram. What is the value of x?

(A) 50
(B) 60
(C) 70
(D) 80
(E) 110

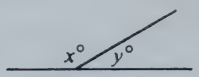

GO ON TO THE NEXT PAGE

Questions 8-27 each consist of two quantities, one in Column A and one in Column B. You are to compare the two quantities and on the answer sheet fill in oval

A if the quantity in Column A is greater;
B if the quantity in Column B is greater;
C if the two quantities are equal;
D if the relationship cannot be determined from the information given.

AN E RESPONSE WILL NOT BE SCORED.

EXAMPLES

	Column A	Column B	Answers
E1.	2×6	$2 + 6$	● Ⓑ Ⓒ Ⓓ Ⓔ
E2.	 $180 - x$	y	Ⓐ Ⓑ ● Ⓓ Ⓔ
E3.	$p - q$	$q - p$	Ⓐ Ⓑ Ⓒ ● Ⓔ

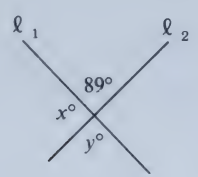

Notes:

1. In certain questions, information concerning one or both of the quantities to be compared is centered above the two columns.
2. In a given question, a symbol that appears in both columns represents the same thing in Column A as it does in Column B.
3. Letters such as x, n, and k stand for real numbers.

	Column A	Column B
8.	The price of 1 dozen apples	The price of a 3 pound bag of apples

$S = \{1, 2, 3, 4, 5, 6, 7, 8, 9\}$

9.	The product of the even integers in S	The product of the odd integers in S

10.	x	y

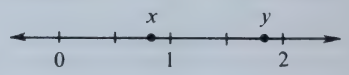

There are 22 boys and 21 girls in a class of 43 students.

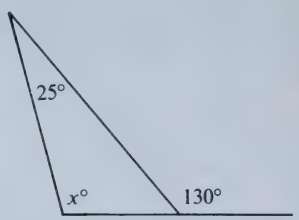

11.	The ratio of the number of girls to the number of boys	The ratio of the number of boys to the number of girls

Questions 12-13 refer to the following definition of $[a, b, c]$ for all real numbers a, b, and c.

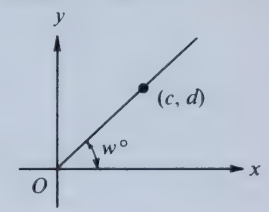

$$[a, b, c] = (a - b)(a - c)(b - c)$$

12.	$[1, 1, 1]$	$[2, 2, 2]$
13.	$[a, 2, 1]$	$a^2 - 3a - 2$

	Column A	Column B
14.	 x and y are points on the number line. xy	2

15.	x	110

Note: Figure not drawn to scale.
$c \neq d$

16.	w	45

SUMMARY DIRECTIONS FOR COMPARISON QUESTIONS

Answer: A if the quantity in Column A is greater;
B if the quantity in Column B is greater;
C if the two quantities are equal;
D if the relationship cannot be determined from the information given.

AN E RESPONSE WILL NOT BE SCORED.

	Column A	Column B
17.	$(3+5)^2$	3^2+5^2

$\times$	P	Q	R
P	1	6	
Q	6		18
R			

An incomplete multiplication table for positive integers P, Q, and R is shown.

18.	The number of blank squares for which products can be calculated	5

If a certain number n is reduced by 3, the result equals $\frac{1}{2}$ the value of n.

19.	n	5

Segment AC represents a ribbon $15\frac{3}{4}$ inches long. The length of AB equals $\frac{2}{3}$ of the length of AC.

20.	The length of BC	5 inches

$xy = 8$ and $yz = 12$.

21.	$\frac{8}{x}$	$\frac{12}{z}$

22.	The volume of a cube if the area of one of its faces is 36 square inches	The volume of a rectangular solid if its edges are 3 inches, 7 inches, and 10 inches

	Column A	Column B
	$x+(4-y)=10$	
23.	$x+y$	$x-y$

The fraction $\frac{1}{7}$ can be written as the repeating decimal 0.142857142857 . . . where the block of digits 142857 repeats.

24.	The 610th digit following the decimal point	5

a and b are positive numbers.

25.	$a \cdot b$	$\frac{a}{b}$

$b+c=a$
$b+a=d$
$c+c=d$

26.	$2b$	$c+1$

$y = 4-(2+x)^2$

27.	The greatest possible value of y	4

GO ON TO THE NEXT PAGE

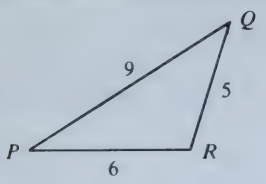

Solve each of the remaining problems in this section using any available space for scratchwork. Then decide which is the best of the choices given and fill in the corresponding oval on the answer sheet.

28. If x and y are positive integers and $x - \frac{1}{y} = \frac{7}{2}$, then $x =$

(A) 3 (B) 4 (C) 6 (D) 7 (E) 8

29. Mary has $(m + 17)$ apples, Scott has $(m + 8)$ apples, and John has $(m + 5)$ apples. All of these apples are put into 3 empty boxes so that each box contains exactly x apples. What is the value of x in terms of m?

(A) $m + 10$
(B) $3m + 10$
(C) $3m + 30$
(D) $10m$
(E) $11m$

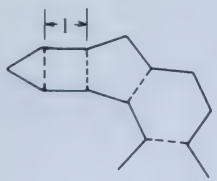

30. In $\triangle PQR$ above, if point S (not shown) is on QR between Q and R, then the length of segment PS could be any number between

(A) 7 and 10 (B) 6 and 9 (C) 5 and 11
(D) 1 and 9 (E) 1 and 15

31. 5 percent of 6 percent is

(A) 0.11% (B) 0.3% (C) 3%
(D) 11% (E) 30%

32. When the figure above is completed, it will consist of six regular polygons, each having sides of length 1 and each having one side in common with each of its adjacent polygons. If the two polygons that complete the figure have 8 and 10 sides, respectively, what will be the perimeter of the completed figure?

(A) 24 (B) 26 (C) 30 (D) 31 (E) 36

33. If a bus averages 55 miles per hour on a certain trip, it will arrive at the terminal 2 hours early. If the bus averages 35 miles per hour, it will arrive 2 hours late. What is the length, in miles, of the trip?

(A) 9 (B) 90 (C) 125
(D) 385 (E) 550

34. Gina has exactly \$39 in \$10, \$5, and \$1 bills in her purse. If she has more \$1 than \$5 bills and more \$5 than \$10 bills, how many different combinations containing at least one of each type could she have?

(A) Two
(B) Three
(C) Four
(D) Five
(E) Six

35. If a rectangular piece of paper is cut into exactly three pieces by making two straight cuts, which of the following could be the total number of edges on the three pieces?

I. 9
II. 11
III. 12

(A) I only (B) III only (C) I and III only
(D) II and III only (E) I, II, and III

*Indicates four-choice questions. (All of the other questions are five-choice.)

The Scoring Process

Machine-scoring is done in three steps:

- *Scanning.* Your answer sheet is "read" by a scanning machine and the oval you filled in for each question is recorded on a computer tape.
- *Scoring.* The computer compares the oval filled in for each question with the correct response. Each correct answer receives one point; omitted questions do not count toward your score. For each wrong answer, a fraction of a point is subtracted to correct for random guessing. For questions with five answer choices, one-fourth of a point is subtracted for each wrong response; for questions with four answer choices, one-third of a point is subtracted for each wrong response. The SAT-verbal test has 85 questions with five answer choices each. If, for example, a student has 44 right, 32 wrong, and 9 omitted, the resulting raw score is determined as follows:

$$44 \text{ right} - \frac{32 \text{ wrong}}{4} = 44 - 8 = 36 \text{ raw score points}$$

Obtaining raw scores frequently involves the rounding of fractional numbers to the nearest whole number. For example, a raw score of 36.25 is rounded to 36, the nearest whole number. A raw score of 36.50 is rounded upward to 37.

- *Converting to reported scaled score.* Raw test scores are then placed on the College Board scale of 200 to 800 through a process that adjusts scores to account for minor differences in difficulty among different editions of the test. This process, known as equating, is performed so that a student's reported score is not affected by the edition of the test taken nor by the abilities of the group with whom the student takes the test. As a result of placing SAT scores on the College Board scale, scores earned by students at different times can be compared. For example, an SAT-verbal score of 400 on a test taken at one administration indicates the same level of developed verbal ability as a 400 score obtained on a different edition of the test taken at another time.

How to Score the Test

SAT-Verbal Sections 1 and 5

Step A: Count the number of correct answers for *section 1* and record the number in the space provided on the worksheet on the next page. Then do the same for the incorrect answers. (Do not count omitted answers.) To determine subtotal A, use the formula:

$$\text{number correct} - \frac{\text{number incorrect}}{4} = \text{subtotal A}$$

Step B: Count the number of correct answers and the number of incorrect answers for *section 5* and record the numbers in the spaces provided on the worksheet. To determine subtotal B, use the formula:

$$\text{number correct} - \frac{\text{number incorrect}}{4} = \text{subtotal B}$$

Step C: To obtain C, add subtotal A to subtotal B, keeping any decimals. Enter the resulting figure on the worksheet.

Step D: To obtain D, your raw verbal score, round C to the nearest whole number. (For example, any number from 44.50 to 45.49 rounds to 45.) Enter the resulting figure on the worksheet.

Step E: To find your reported SAT-verbal score, look up the total raw verbal score you obtained in step D in the conversion table on page 242. Enter this figure on the worksheet.

SAT-Mathematical Sections 2 and 6

Step A: Count the number of correct answers and the number of incorrect answers for *section 2* and record the numbers in the spaces provided on the worksheet. To determine the subtotal A, use the formula:

$$\text{number correct} - \frac{\text{number incorrect}}{4} = \text{subtotal A}$$

Step B: Count the number of correct answers and the number of incorrect answers for the *five-choice questions (questions 1 through 7 and 28 through 35) in section 6* and record the numbers in the spaces provided on the worksheet. To determine the subtotal B, use the formula:

$$\text{number correct} - \frac{\text{number incorrect}}{4} = \text{subtotal B}$$

Step C: Count the number of correct answers and the number of incorrect answers for the *four-choice questions (questions 8 through 27) in section 6* and record the numbers in the spaces provided on the worksheet. To determine the subtotal C, use the formula:

$$\text{number correct} - \frac{\text{number incorrect}}{3} = \text{subtotal C}$$

Step D: To obtain D, add subtotal A, subtotal B, and subtotal C, keeping any decimals. Enter the resulting figure on the worksheet.

Step E: To obtain E, your raw mathematical score, round D to the nearest whole number. (For example, any number from 44.50 to 45.49 rounds to 45.) Enter the resulting figure on the worksheet.

Step F: To find your reported SAT-mathematical score, look up the total raw mathematical score you obtained in E in the conversion table on page 242. Enter this figure on the worksheet.

SAT SCORING WORKSHEET

SAT-Verbal Sections

A. Section 1: _____ no. correct − ¼ (_____ no. incorrect) = _____ subtotal A

B. Section 5: _____ no. correct − ¼ (_____ no. incorrect) = _____ subtotal B

C. Total unrounded raw score (Total A + B) _____ C

D. Total rounded raw score (Rounded to nearest whole number) _____ D

E. SAT-verbal reported scaled score (See the conversion table on page 242.) [ ] SAT-verbal score

SAT-Mathematical Sections

A. Section 2: _____ no. correct − ¼ (_____ no. incorrect) = _____ subtotal A

B. Section 6: Questions 1 through 7 and 28 through 35 (5-choice) _____ no. correct − ¼ (_____ no. incorrect) = _____ subtotal B

C. Section 6: Questions 8 through 27 (4-choice) _____ no. correct − ⅓ (_____ no. incorrect) = _____ subtotal C

D. Total unrounded raw score (Total A + B + C) _____ D

E. Total rounded raw score (Rounded to nearest whole number) _____ E

F. SAT-mathematical reported scaled score (See the conversion table on page 242.) [ ] SAT-math score
